@echo off
REM This script is used to allow Audiograbber to use the WMA9 encoder
REM from http://www.audiograbber.com-us.net/boards/ubb/Forum1/HTML/004413.html
REM This version has command line tagging added by Mithat Konar.
REM It can *almost* be used with CDex if it's in a path that has no spaces or other goofy characters.
REM -- encoder path to be reset in CDex after startup to prevent it from running in the CDex install directory
REM -- all indications that the file was encoded as expected are good, but the files make winamp crash and there are no tags
REM Audiograbber argument list: %s %d WMA9STD 1 192_44_2 "%4" "%2" "%1" "%6" "%3" "%7"
REM CDex argument list: %1 %2 WMA9STD 1 192_44_2 "%t" "%b" "%a" "%y" "%tn" "%g"

set vInFile=%1
set vOutFile=%2
set vACodec=%3
set vAMode=%4
set vASetting=%5
REM save the first five input arguments and SHIFT to work agound BAT file 9 input argument limit
